## Baskets and wickerwork made of willow

### traditional handicraft and modern design

#### ♦ Ergonomic shapes

provide optimal transport qualities

#### ♦ Colour design

with the natural particular colours of  
the different sorts of willows

#### ♦ Individual pieces

specially made for you

### Willows

Through my own cultivation of different sorts of willows, I dispose over a wide range of natural colours for weaving. Besides this I use stripped white as well as boiled and stripped reddish brown willows. The cultivation of those willows follows ecological principles, which means there are no artificial fertilizer or toxic chemicals used. All waste created during the whole process can be recycled.

### Baskets and wickerwork

Apart from the traditional handicraft I design baskets and wicker according to my own concepts. The mixture of colours and shapes creates unusual pieces.

### Specially made individual pieces to meet your request

You can set exact measures, choose the combination of colour and have an influence on the detail of shape. During a personal discussion I'd love to give you some advice. Prices depend on the size of the basket. There is no additional charge on design in colour and pattern.

### Courses

I also offer weaving-courses in the form of adult education classes and private classes. Ask for appointments and conditions

### ERGO-baskets

The ergonomic shape is my own design for baskets especially comfortable to carry. Working intensely with shapes woven freehand and the examination of different qualities in use and transport were the reason for me to develop ergonomic baskets shaped to fit to the contours of the body.

- ♦ **Shaped to fit the contours of the body,** ERGO-baskets will cling to your body
- ♦ and providing **a transport close to the body,** which distributes extensively the pressure of the supporting surface and makes the transport notably more easier and comfortable.
- ♦ ERGO-baskets guarantee more **freedom of movement.**

**Bee-wax-balm** is set into all wickerwork for care and protection.

All leather parts come from a workshop, where only **vegetable tanned leather** is used.

**With the quality of solid handicraft my baskets prevail throughout a long lifespan...**
