ERGO-baskets for fly-fishing

ERGO-basket for fly-fishing

The ergonomic shape is my own design for baskets especially comfortable to carry. Working intensely with shapes woven freehand and the examination of different qualities in use and transport were the reason for me to develop ergonomic baskets shaped to fit to the contours of the body. So I created e. g. the **ERGO-basket for fly-fishing** - with its unique shape fishing will be as comforting as ever.

- ◆ **Shaped to fit to the contours of the body**, the basket will cling to your body
- ◆ and providing **a transport close to the body**, which distributes extensively the pressure of the supporting surface and makes the transport notably more easier.
- ◆ An additional **belly-strap** guarantees maximum freedom of movement during fishing. The straps come from a little leather workshop, where only **vegetable tanned leather** is used.

Specially made individual pieces to meet your request

You can set exact measures, choose the combination of colour and have influence on the detail of shape. During a personal discussion I'd love to give you some advice.

The price depends on the size of the basket and/or the number of fixed straps. The prices range between 140.- € and 240.- €.
